#### **DETAILED ACTION**

#### Election/Restrictions

Applicant's election without traverse of Claims 1-16 in the reply filed on 28

September 2005 is acknowledged. Cancellation of the non-elected claims is required.

### Specification

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter.

### Claim Objections

Claims 1-16 are objected to because of the following informalities: The claims, like the specification, are poorly translated into English making them difficult to understand what exactly is being claimed. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto et al. US Patent No. 6,077,310.

Application/Control Number: 10/613,817

Art Unit: 2825

In reference to claim 1, Yamamoto teaches determining a zone enclosing a hole on a mask, the zone containing a plurality of cells (Figure 12A), selecting the cells adjacent to an edge of the hole in the zone to be corrected and determining the correction lengths based on the diffraction result of the hole and cells in the zone and correcting all of the edges of the hole (Column 7, lines 28-65).

In reference to claim 2 and 12, Yamamoto teaches wherein the zone is a collection of a bank of cells around holes and each is a closed loop and that the zone is a proper size (Figure 12A, column 12, lines 6-26)

In reference to claim 3, Yamamoto teaches wherein each bank has the same number of cells (Figure 12A).

In reference to claims 4-7, Yamamoto teaches wherein the diffraction of the template is determined by either rule or model based OPC (column 1, lines 39-46).

In reference to claims 8-9, Yamamoto teaches wherein the edges are lateral sides of the hole (Figure 4).

In reference to claim 10, Yamamoto shows padding corners (Figure 12B).

In reference to claim 11, Yamamoto shows cells enclosing the two outer edges of the corner (Figure 12B).

In reference to claim 12, Yamamoto teaches that the zone size is based on the critical dimensions and wavelength (column 6, line 62 – column 7, line 65).

In reference to claims 13-16, Yamamoto teaches wherein the elements are repeating patterns such as arrays or memory elements (Figures 12A-B).

Application/Control Number: 10/613,817

Art Unit: 2825

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon W. Bowers whose telephone number is (571)272-1888. The examiner can normally be reached on 8:30 am until 5:00 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on (571)272-1907. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
